Load Diagrams

Axial Load

The graph shows the deflection f of the slide under the effect of the force F . The deflection is independent of the stroke.

Transverse Load

The graph shows the deflection f of the slide under the effect of the force F . The deflection is independent of the stroke.

Lateral Load

The graph shows the deflection f of the slide at point A under the effect of the torque. The deflection is independent of the stroke.

See page 76

Permissible travel time t relative to the stroke length and the additional mass m

The travel time t determined from the diagram may not be undershot.

Recommendation: When selecting the module, the travel time t should be assumed as being 20% more.

Permissible travel time t = travel time without valve switching time, at nominal pressure 6 bar.
